PROFESSIONAL SUMMARY

Junior Data Analyst (BCA Honors, 2024) with a focus on SQL-driven analysis and Power BI / Tableau dashboards. Completed four end-to-end portfolio projects on public and practice datasets of 1,470 to 99,000+ records, covering retention, churn, profitability and attrition. Each project ends in a quantified finding and a business recommendation. Seeking a Data Analyst or BI Analyst role focused on KPI reporting and dashboards.

SKILLS

Databases and Languages: SQL, PostgreSQL, Joins, CTEs, Window Functions, Python (Pandas)

BI and Visualization: Power BI, Tableau, DAX, Power Query, Dashboard Development, Data Visualization

Microsoft Excel: Pivot Tables, VLOOKUP, Data Validation

Analytics: Exploratory Data Analysis, Cohort Analysis, KPI Reporting, Data Cleaning, Descriptive Statistics

Tools: Git, GitHub

PROJECTS

HR Attrition & Workforce Analytics Dashboard Sep 2026 – Oct 2026
Tableau, Excel github.com/subhankar-das18/HR-Attrition-Workforce-Analysis

- Analyzed 1,470 employee records from a public HR dataset to study attrition by department, job role, tenure, overtime and income band.
- Built an interactive 3-view Tableau dashboard (attrition overview, employee profiles, compensation drivers) using calculated fields, parameters and filter actions.
- Found that employees working overtime left at 30.5% versus 10.4% for those who did not (nearly 3x); recommended targeting overtime reduction in the highest-attrition roles.

E-Commerce Sales & Customer Cohort Retention Analysis Aug 2026 – Sep 2026
PostgreSQL, Python (Pandas) github.com/subhankar-das18/E-commerce-Sales-Customer-Cohort-Retention-Analysis

- Analyzed 99,000+ orders from the public Olist Brazilian marketplace dataset across a 6-table schema using SQL CTEs and window functions.
- Built cohort retention, rolling revenue and delivery SLA analyses using SQL and Pandas.
- Found that only 3% of customers made repeat purchases yet delivered 88% higher lifetime value, showing growth was acquisition-driven; recommended investing in post-purchase retention.

E-Commerce Profitability Analysis Mar 2026 – Apr 2026
SQL, PostgreSQL, Power BI, Excel github.com/subhankar-das18/E-commerce-Profitability-Analysis

- Consolidated 10,000+ transactions across product categories, regions and time periods using SQL joins and CTEs.
- Developed a Power BI dashboard with KPI cards and drill-down slicers for profitability tracking.
- Estimated a potential margin improvement of up to 15% in high-return product categories; recommended reviewing pricing and return policy for those categories.

SaaS Revenue & Churn Analysis Jan 2026 – Feb 2026
SQL, Power BI, Excel, DAX github.com/subhankar-das18/SaaS-Churn-Analysis

- Tracked MRR, ARR, churn and retention for 5,000+ subscribers by plan and industry using Power BI and DAX.
- Estimated that about 23% of revenue sat in at-risk customer segments (revenue leakage).
- Found that Basic-plan customers churn 3x faster than Pro and Enterprise customers; recommended retention campaigns and upgrade nudges for the Basic tier.

EDUCATION

Bachelor of Computer Applications (Honors) Jun 2021 – Jun 2024
University of North Bengal, Siliguri, West Bengal, India CGPA: 9.37/10

CERTIFICATIONS

- Data Analytics Job Simulation, Deloitte (Forage) Jun 2026
- Quantitative Research Job Simulation, JPMorgan Chase & Co. (Forage) Mar 2026
